Minimization of plastics at NameCI

The institute has a policy to minimize the use of plastic as an organization.

Today, plastic containers have widely entered our lives. On the one hand, it is convenient, on the other hand, it is safe, it is more durable than glass, porcelain or ceramic dishes. It doesn't break quickly, it's comfortable compared to metal dishes, it's light. But these plastic containers also differ from each other in terms of use. Some of them can be safe, while others can be dangerous. Therefore, in order to reduce the use of plastic containers in the kitchens of the institute, in addition to single-use plastic containers, there are also many reusable containers. Usually, such dishes are round, square, rectangular, chest-like, and made to be worn together.

The Institute has a policy to minimize the use of single-use items.

Single-use plastic waste accumulates, damaging the environment. On the one hand, it is convenient, on the other hand, it is safe, it is more durable than glass, porcelain or ceramic dishes. It doesn't break quickly, it's comfortable compared to metal dishes, it's light. But these plastic containers also differ from each other in terms of use. Some of them can be safe, while others can be dangerous.
